

Title: Research on the influence of cement content on the bearing capacity of the soil-cement pile to treat soft clay in the Ha Thanh River urban area, Quy Nhon City, Binh Dinh province, Vietnam

Page 1

The introduction of the manuscript does not fully overview the research and does not highlight the significance of the research

Page 2

Are the words "soft clays" in table 1 and "soil" in table 2 different?

Page 3

What type of cement is used in this manuscript?

Page 4

The manuscript does not explain the results shown in Figures 4 and 5?

- Why when cement increases from 12% to 15%, the strength increases from 70% to 90%? Theoretical basis to explain this?
- Why when cement increases from 15% to 20%, the strength only increases by 15%?

Page 5

Reviewers do not understand the results shown in Figure 4?

Page 6

References are not sufficient to support the manuscript.
